On June 13, 2023, XPRIZE, Vatom, Menagerie, and RampRate met with key Casper executives (Mrinal Manohar, Ralf Kubli, Patrick Storchnegger, Medha Parlikar) to review the Milestone 3 & 4 resubmission detail.

On this call, the Casper Executive Team relayed that they unanimously confirm and support the full project, including Milestones 3 & 4 resubmission detail, and had never provided any feedback to the contrary regarding the original submission.

The Casper team noted the key aspect driving this project for Casper is how it will highlight to the world that Casper and XPRIZE can prove blockchain can actually deliver a proper DAO with the expert combination of Dr. Wulf Kaal's research, XPRIZE's reputation and backing, and Casper Labs's blockchain. This is the North Star and Casper is keen to show it to the world.

It is important to note that as the project moves forward, the XPRIZE, Vatom, Menagerie and RampRate teams intend to ensure transparency in what is being built, and that it fully aligns with the Casper team's expectation at every step. Further, there was an agreement to shortly begin co-development of a plan for public relations messaging and marketing to cover the next 12 months of deployment of the software platform / capabilities.

The Casper Executive Team has verbally and unanimously approved Milestones 3 & 4 and will assign additional internal resources for review of remaining milestones after June 30, 2023.

Feel free to reach out to me directly should there be any further questions regarding this meeting.

Sincerely,

Jim Mainard

CTO, EVP Deep Technologies
XPRIZE
